YOUNESS SAFOUANI

DATA ANALYST | SQL | POWER BI | PYTHON

Montreal, Quebec | youness.analyses@gmail.com | linkedin.com/in/yousef-sifawi-9a0787427

PROFESSIONAL SUMMARY

Bilingual data analyst with more than 10 years of experience in telecommunications and extensive practice analyzing operational and technical information. Strong command of SQL, Power BI, Python and Excel to clean, validate, structure and interpret data. Known for turning complex findings into clear reports, documented controls and practical recommendations for business and technical teams.

TECHNICAL SKILLS

SQL – Joins, CTEs, subqueries, aggregations, window functions, views and data validation
Power BI – Power Query, DAX, relational modelling, measures, KPIs, filters and dashboards
Python – Pandas, NumPy, scikit-learn, automation, exploratory analysis and visualization
Excel – Pivot tables, lookups, formulas, reconciliations, controls and data preparation
Data quality – Profiling, validation, anomaly detection, traceability, data dictionaries and documentation

RELEVANT DATA ANALYTICS EXPERIENCE

Operational Data Analysis – Telecommunications

Quebecor Inc. and subsidiaries | Montreal, Quebec | Oct. 2018 – 2026
Official title: Service Technician – Telecommunications and Technical Support
- Collected and structured data from service records, diagnostics, tests and technical interventions.
- Cleaned and validated information by reviewing missing fields, duplicates, inconsistent values, statuses and traceability.
- Analyzed incident histories to identify likely causes, anomalies and recurring operational trends.
- Categorized records by service type, symptom, cause and status to improve comparison and prioritization.
- Consolidated findings into clear summaries supporting follow-up, escalation and operational decisions.
- Documented controls, results and recommended actions to maintain reliable and usable records.
- Communicated conclusions to users and technical teams in clear, solution-oriented language.

Technical Data Analysis – Internet Services

Bell Canada | Montreal, Quebec | May 2013 – Oct. 2018
Official title: Technical Support Technician – Telecommunications
- Collected, verified and interpreted diagnostic data for Internet, Wi-Fi and connected-device services.
- Analyzed test results to detect variances, isolate causes and prioritize corrective actions.
- Cross-referenced tracking systems, case histories and technical observations to validate hypotheses.
- Categorized incidents and recurring symptoms to compare trends and accelerate diagnosis.
- Prepared structured escalation summaries covering tests performed, data observed and results obtained.
- Maintained complete and consistent records to support continuity of analysis and technical intervention.

HANDS-ON EXPERIENCE – SQL, POWER BI AND PYTHON

Data analytics and business intelligence projects

- Analyzed, cleaned and validated datasets with SQL, Python and Excel, correcting missing values, duplicates, inconsistent formats and anomalies.
- Built SQL queries using joins, CTEs, aggregations, subqueries and window functions to produce reliable analytical indicators.
- Prepared data models and analytical views for reporting, reconciliation and performance monitoring.
- Created Power BI dashboards with Power Query, relationships, DAX measures, KPIs, filters and slicers to support exploration.
- Performed exploratory analysis to compare segments, detect trends, explain variances and identify actionable findings.
- Developed a customer churn prediction model covering feature preparation, classification, evaluation and interpretation.
- Designed ETL/ELT pipelines to ingest and transform CSV, Excel and SQL data before analytical use.
- Implemented data-quality checks, source-to-target reconciliations, processing logs and documented validation rules.
- Created a data dictionary and methodology notes so calculations, KPIs and transformations could be reviewed easily.
- Developed ComptaPrivée AI, a local solution supporting the classification, extraction and validation of financial data.
- Presented results through concise findings, visualizations and recommendations adapted to user needs.

TOOLS AND METHODS

Power BI: Power Query, DAX, modelling, KPIs, dashboards and report publishing
SQL: analytical queries, data preparation, consistency checks and reconciliations
Python: Pandas, NumPy, scikit-learn, Matplotlib, automation and exploratory analysis
Excel: pivot tables, lookups, formulas, controls and file preparation
Data: ETL/ELT, CSV, relational databases, profiling, quality, traceability and documentation
Methods: requirements gathering, validation, analysis, visualization and communication of results

EDUCATION AND CERTIFICATION

AEC – Big Data Developer (LEA.C0) | Collège de Bois-de-Boulogne, Montreal | May 2025 – Dec. 2026
750-hour program: SQL, Python, Power BI, visualization, ETL/ELT, Spark, Kafka, Snowflake, MongoDB and cloud computing.
IBM Data Analyst Professional Certificate | IBM SkillsBuild
Eleven-course program in data analysis, Excel, SQL, Python, visualization and communication of results.

PROFESSIONAL STRENGTHS

Analytical rigour, autonomy, curiosity, documentation, collaboration, client focus and clear communication.

LANGUAGES

French – professional | English – professional
